

T3 Motion Introduces Motiontrak A “Black Box” Vehicle Data Recording System - Enhances Safety, Reduce Fuel and Insurance Costs, Simplify Litigation and Optimize Fleet Management

*New MotionTrak 300 Series Captures Video Footage Plus GPS Location, Vehicle
Speed and g-Force Shocks for Single-Screen Display and Analysis*

Costa Mesa, CA (June 29, 2010) – T3 Motion, Inc. (OTCBB: TMMM, www.t3motion.com), a leader in cost-effective, clean-technology electric vehicles, is launching a new product line with its Motiontrak 300 Series recording system. This compact, vehicle-mounted, “black box” unit captures video and data to help optimize routes and fleet management, encourage safe and efficient driving habits, investigate accidents and simplify litigation, decrease fuel consumption, and reduce insurance costs.

Selectable by the user, data gathering by the MotionTrak system can be triggered by an event or set for constant recording. Data monitored include vehicle speed, location and g-force shocks. Built-in GPS capability is integrated with Google Maps to track precise location and provide a vehicle movement overview. The system’s small cameras can be mounted discreetly to record video footage from any viewpoint.

Motiontrak 300 offers important benefits to both commercial and consumer users.

Law enforcement agencies and insurance companies can obtain clear data on vehicle position before and after an accident, assistance in determining at-fault parties in accidents, and vital information for accident reconstructions. Corporate and fleet management will have information to monitor employee locations, reduce accidents and related costs such as insurance, optimize routes, and track vehicles for customer service. Government agencies will see increased enforcement opportunities, data for proof of speeding, improved driving behaviors, and a reduction in the number, severity and cost of accidents.

For consumers, Motiontrak 300 will help encourage safer driving habits, which may result in improved gas mileage, reduced insurance costs, and fewer accidents.

Sophisticated software enables the user to see video footage from the vehicle's perspective, overhead Google Earth location display, and numeric as well as graphical data on a single screen. The video footage can be searched frame by frame for detailed analysis. PC-based viewing software and data sharing make export quick and easy.
