

T3 Motion Achieves Significant Presence in Deployments with Public Safety Agencies in Five Middle Eastern Countries Providing Clean Energy Electric Vehicles

*T3 i-Series ESV Provides Innovative Clean-Energy and Clean Technology Solutions
with Dramatically Reduced Energy Cost and Environmental Impact*

Costa Mesa, CA (March 2, 2010) – T3 Motion, Inc. (OTCBB: TMMM, www.t3motion.com), a leader in cost-effective, clean-technology vehicles, has garnered significant deployments in the Middle East for its T3 i-Series electric standup vehicle (ESV). These innovative, all-electric vehicles are providing clean energy security solutions in five countries throughout the region including Abu Dhabi, Bahrain, Qatar, Saudi Arabia and Turkey with trials and demonstrations underway in other countries in the area as well.

"T3 Motion is proud to have been selected to provide our clean-energy T3 i-Series ESVs for critical public safety roles in this dynamic part of the world. We look forward to assisting these agencies in achieving their world-class commitment to public safety and clean technology," said T3 Motion CEO Ki Nam. "Our strategic business plan for 2010 includes a strong focus on continued expansion in the Middle East region to provide clean-energy security solutions."

In Qatar, the T3 i-Series has been selected by the country's Ministry of the Interior for a wide range of public safety applications including military, police and rescue. The vehicles were featured prominently in the recent National Day Parade.

The "green technology" T3 i-Series vehicles are being deployed by the Al Faza'a Police and Al Khwiyah Forces as well as the Emiri Guard in Doha. The Al Faza'a Police plan to utilize the clean-energy T3 i-Series vehicles to patrol the Emirs Palaces, the Corniche, the Center of Qatar, and a selection of public areas and parks. The sizeable, multi-unit order continues T3 Motion's growth in the Gulf Cooperation Council (G.C.C.) region comprised of Qatar, Bahrain, Oman, Kuwait, Saudi Arabia and the United Arab Emirates.

In Abu Dhabi, the Al Ain Community Policing Branch has deployed the T3 i-Series at Mabzarah Park and the City Center. Additional deployments include vehicles with special specifications at Al Khaleej Al Arabi Corniche, Khalidia and public parks in the capital.

According to Colonel Hamad Ajlan Al Amyami, Director of Al Ain Police Directorate, the T3 i-Series is intended to enhance communication with community members. This initiative reflects the modern face of the Abu Dhabi police in building better relations with the general public, preventing crimes and ensuring social security.

"This idea is the first of its kind in the Middle East, aiming at enhancing the social role of the police in Abu Dhabi city," noted Abu Dhabi Police Department Acting Director General of Operations Department Lieutenant General Mohammad bin Al Awadi Al Menhali.

The T3 Series is also being used by the department of Tourist Police at the Directorate General of Policing Operations at Abu Dhabi Police as part of ongoing development and modernization strategies of the Abu Dhabi police for "Secure Tourism."

"Our communities live in harmony which is reflected in their interaction among residents, tourists and visitors in Abu Dhabi," said Major Muzeed Fahd Al Uteibi, Acting Head of the Section.

Reaching speeds up to 15.5 mph (25 kph) and designed with the input of law enforcement and security industry professionals, the T3 i-Series features a zero-degree turning radius and compact design, perfect for maneuvering through crowds and tight spaces. Also unique to the T3 i-Series is the most user-friendly and intuitive operation of its kind, giving the rider a sense of superior stability and command presence.

The quiet, environmentally friendly, zero-gas-emission vehicles include an integrated LED lighting system and an incomparable low cost of operation. They can run for less than 10 cents per day without requiring downtime due to the vehicle's two rechargeable, lightweight batteries (Power Modules) that can be easily swapped out while in use for continual deployment and an unlimited range.
